

# Blocks Basics

For a full list of Tags and a "Tags cheatsheet" - see the Pulse5 PDF manual:

<https://help.pulsecms.com/article/34-pulse-manual> ([//help.pulsecms.com/article/34-pulse-manual](https://help.pulsecms.com/article/34-pulse-manual))

Blocks are sections of content that you can edit with an easy to use WYSIWYG editor ( Redactor (<http://imperavi.com/redactor/>)).

Blocks are useful for sections of content that repeat or if you just want to make editing easier for someone who prefers not to edit pages in html or markdown (<http://pulse-cms.helpscoutdocs.com/article/21-markdown>).

To place a block into a page, use the following syntax:

```
{{block:myblock}}
```

This tells Pulse to look for a block in the blocks folder called 'myblock.txt' and place its content at the current position.

**Note:** You can only place blocks into a "page" within the Pulse admin, you cannot embed into external pages outside of the admin.

## Super Blocks

Super blocks are like regular blocks with two differences. First the editor is removed and a plain text editor is provided. Second, you can have code such as PHP and JS in the block. To create a Super Block, just create a new block and prefix the name with 'sb\_', for example 'sb\_myblock'.

If you would like all blocks to be super blocks by default, you can disable the WYSIWYG editor in config.php globally.
