How to change a theme?

Pulse default theme is located in "/template" folder. If you have a new theme ready and want to replace the default theme, you can replace "layout.php" file and theme assets in "/template" folder. Now replace the content (blocks/blog/pages) in "/content" folder. That should do it.

If you have got the theme from a third party, there can be a "Default.txt" file. Open the file and follow the instructions.

If you don't want to replace the default theme or want to use multiple themes, you can make a folder with any name in "/template" folder and put your secondary theme there.

To know more about theme/template follow this link (//help.pulsecms.com/article/17-template) .
